Fitness trackers watch MS patients' routines

→ Study helps assess ability to walk, aids management of condition

By Nidhi Subbaraman

Difficulty walking is one of many ymptoms facing the 2.3 million peowrist-worn fitness tracker paired with a smartphone app could help monitor their condition and fitness routine, according to a study conducted by researchers from Cambridge pharmaceutical company Biogen and the online patient community Patients Like

The two organizations collaborated on the project, an investigation to test thing Silicon Valley men," who probaif wearable devices could reliably as-bly don't experience the same condisist people living with MS. The partnership benefits both of them.

For Biogen, it is part of a broad push to invest in technologies that can improve the daily health of patients with MS. The company is also working with Cleveland Clinic to build an iPad app that could serve as an in-clinic dianactivity tracker agnostic tool.

For Cambridge-based Patients Like Me, which hosts forums for patients to share information about medications, side effects, and symptoms, the project allows its members to contribute to medical research. Patients Like Me recently began allowing members to believed such tracking link and display activity data from

traditionally assessed by doctors in a clinic during a half-hour appoint- condition. But "in the real world, the pave-

ments in Boston are icy, there are stairs, and you don't only have to walk 25 feet," said Paul Wicks, vice president of innovation at Patients Like

Using a monitoring device could offer a long-term view of a patient's fitness habits, granting them more personalized care. For researchers who that are making it easier to for rehave access to thousands of cases like searchers to access data collected usthis, it could provide deeper understanding about the day-to-day reality of living with the disease.

The researchers contacted the more than 1,000 members of the Pa- as a storage house for data collected tients Like Me MS community and filled the study within a day, said Jane Rhodes, director of new initiatives at

About 250 people responded and were sent Fitbit fitness trackers. Of those, 203 accepted the conditions and agreed to share their data with the Patients Like Me researchers for

EIGHT HIGH AMBITIONS

THURSDAY, APRIL 16, 2015

The Boston skyline could soon have a startling new addition as eight development teams vie for the rights to build a skyscraper at the site of the closed city-owned Winthrop Square Garage. Each of the eight propose building a version of a tall mixed-use tower, but their visions for the area detailed below — vary widely. BY DAN ADAMS

The Boston Globe

DEVELOPER: Millennium Part-ARCHITECT: Handel Architects HEIGHT: 750 feet

Millennium, best known for the 60-story Millennium Tower currently under construction downtown, wants to build a 750-foot skyscraper on the Winthrop Square site. The building would in clude 360 residential units. However, nearly half of its total area, 325,000 square feet, would be of fice space. Lower stories would include 41,000 square feet of retail space. The developer said in its application that it would partner with the Asian Community Development Corporation and commit \$10 million toward affordable housing in Chinatown

DEVELOPER: Trinity Winthrop Square LLC

ARCHITECT: The Architectural HEIGHT: 51 stories

Trinity is proposing a 51-story mixed-use project with a 276room destination hotel, 328 luxu ry apartments, and 261 luxurv condos. About 6.5 percent of the residences would be affordable, the developer said: Trinity also wants fees it pays to the city to go toward affordable housing in East Boston. The development would include a two-level restaurant along Devonshire Street, two additional retail spaces, and a black box theater. GB Lodging, known for its Ace Hotels in New York and Palm Springs, would develop the hotel.

DEVELOPER: HYM Investment Group LLC **ARCHITECT:** Elkus Manfredi Architects

At 780 feet, HYM's proposed residential tower would be just 10 feet shorter than Boston's tallest building, the John Hancock Tower. Intriguingly, the company run by former Boston Redevelopment Authority director Thomas O'Brien is partnering with the Franciscan Friars of Holy Name Province. The 69-story building would be constructed on the site of the nearby St. An thony Shrine & Ministry Center, while the Winthrop Square Garage site would become a new public plaza surrounded by a new St. Anthony Shrine Church, a new friary and ministry center for the Franciscans, and a new public school, Under its proposal, HYM would provide \$25 million to build the school, then permanently lease the land back to the city. The tower would contain 700 condos and apartments, with a public parking ga rage underneath. The developer has not yet finalized a design and did not provide a detailed rendering to the city

DEVELOPER: The Fallon Co. ARCHITECT: HOK Fallon is proposing a large, mixed-use tower around 700 feet high, with condos, apartments, and a pedestrian galleria with 30foot ceilings and high-end retail shops. The company would also construct a shorter apartment building on the parcel. The tower would feature "a striking glass façade and unique design that will provide an airy, open feel to complement and soften the dominant masonry and granite structures, which currently define the neighborhood," according

Passion

Her list makes it easier to plan a party

In Boston event planning circles, Dianne Butt is knownas "the secret list lady."

But that's a bit of a misnomer.

Yes, Butt does maintain a list that's highly coveted by local event planners. But it's no secret

The origin of the list dates to 1997, when Butt (whose first name is pronounced DEE-on) moved from New York, where she owned a special events planning firm, to Boston, where she could not find a comprehensive list of the dates and locations of all nonprofit fundraisers in the area. That's critical for event organizers trying to avoid overlap, yet it was nowhere to be found.

"In Manhattan, you could make three phone calls and get that information," said the 67-year-old Weston resident, "In Boston, you had to call every hotel and every nonprofit, and even then you weren't sure what you were up against because some people were having their events at historic sites or museums."

And that, Butt said, "drove me crazy."

So she took it upon herself to develop that missing list. Nearly two decades later, it contains more than

1,000 annual events ranging from nonprofit galas to charity races to fund-raising luncheons. She estimates it captures 90 percent of all major nonprofit events happening in and around Boston - not bad for a city that used to have no master list at all.

It also includes commencements and big public gatherings, since those can fill hotels and snarl traffic.

Butt, who teaches event management at Lasell College, compiles the list in her spare time by accepting submissions and combing through every calendar listing she can find. And as long as nonprofits share their event information with her, she shares her list with them for free in a weekly e-mail.

Over the years, she has also developed a free listsery that has grown into an advice forum and job board for the nonprofit sector.

As she likes to say: "It's my gift to Boston!

Google target of EU on two legal fronts

→ Favoritism in searches and bullying on Android alleged

> **By Raf Casert** and Michael Liedtke

BRUSSELS - The European Union's escalating legal attack on Google is likely to ignite a debate about whether the Internet search leader makes life more convenient for consumers or abuses its power to squeeze out rivals who might have something better to offer.

The contrasting views of Google's business practices came into sharper focus Wednesday after Europe's antitrust regulators challenged the Mountain View, Calif., company on two different fronts.

Drawing upon a nearly five-year probe, the regulators filed a complaint alleging that Google has been improperly favoring its own shopping comparison service in its own search results. The charges could still be expanded to include other services highlighted in Google's search results, such as travel recommendations and merchant reviews, mounting a challenge to the digital advertising system that generates most of the company's

As if that blow was not enough, Europe's regulators also announced they are opening a separate inquiry into whether Google has been illegally using its popular Android software to bully smartphone and tablet makers to feature Google's products on their mobile devices.

Google staunchly denied any wrongdoing, setting up a showdown that could take years to resolve. The

'Dominant companies have a responsibility not to abuse their powerful market position.'

MARGRETHE VESTAGER $EU\,competition\,commissioner$

company has 10 weeks to respond to

Wednesday's complaint. If regulators can prove Google has been breaking the law in the European

Union's 28-country bloc, it could be costly even for a firm as rich as Google The EU can impose fines of 10 percent of annual revenue, or some \$6 billion in Google's case, and force the company to overhaul its system for

recommending websites in Europe. The EU executive commission said it found that Google "gives systematic favorable treatment" to its Google Shopping at the expense of others in

its general search results. Margrethe Vestager, the EU's competition commissioner, said that was a problem because Google is so dominant in Europe. It has a market share of more than 90 percent of Internet searches in the EU, compared with

"It is not based on the merits of Google Shopping that Google Shopping always comes up first," Vestager said. "Dominant companies have a responsibility not to abuse their power-

ful market position."
Though Wednesday's charges centered on the shopping service, the EU said it is pursuing other antitrust issues against Google, including an in-

quiry into its online ad business. That suggests the EU's case against Google could become as big as the decadelong battle it waged with Microsoft, which ended up paying a total of

about \$2.3 billion in fines. "Clearly every company needs to obey the same legal rules of the road," Microsoft said in a Wednesday statement. The software maker is among the companies that spurred the EU's investigation of Google.

In the separate investigation into Android, the EU alleges that Google is breaking the rules by obstructing rival operating systems, applications, and

Amit Singhal, the senior vice president for Google Search, said that "while Google may be the most used search engine, people can now find and access information in numerous different ways — and allegations of harm, for consumers and competitors have proved to be wide of the mark."
